SuperState Public Energy License (SPEL-1.0)

Issued By:

James Rhymer Jr

Author and originator of the SuperState Battery and Zeus Ring MK2 technologies.

Effective:

Immediately and permanently from date of publication.

Section I - Core Declaration

The SuperState Battery and Zeus Ring MK2 are hereby released into the global public commons, under an open-source license that:

- Prohibits any private or corporate entity from patenting, copyrighting, or otherwise claiming exclusive ownership of the core design, operational principles, or any derivative systems built on the original designs.
- Allows any individual, collective, or company to build, replicate, modify, or improve upon the systems for private, commercial, or research use.
- Ensures all derivative works must include attribution to the original creator and reference to the open SuperState architecture.

Section II - Global Patent Immunity

To block patent trolling and rebranding attacks:

- All system names (e.g., Zeus Ring, SuperState Battery, Supermercury, REBCO Clamp, etc.) are placed under a "defensive common use shield."
- This includes name variants such as:
  - Zoo Ring, ZooSpring, Tesla Ring, Toroidal Compression Ring, etc.
- Any name describing a ring-based magnetic plasma containment system or gold-particle cryogenic battery.
- If a company renames the system, they may charge for services rendered using the technology (e.g., power distribution), but they may not claim exclusive rights to the hardware design or theory.

Section III - Modification Clause

Derivative systems must:

- Reference the original SuperState architecture in documentation or attribution.
- Remain publicly available unless they are built entirely from scratch without use of any of the

licensed blueprints or principles.

- Include a clause allowing others to also build upon that improved design, maintaining an open-source lineage.

Section IV - Global Protection Statement

To enforce the license globally:

- The license is submitted with publication timestamps, checksum records, and distributed across redundant open access archives (Google Drive, GitHub, IPFS, etc.).
- This serves as proof-of-origin and prior art to block patent attempts in all jurisdictions, including WIPO, USPTO, EPO, JPO, and CNIPA.

Section V - Exclusion Zone

The following are not covered under this license and may be protected by other means:

- Proprietary magnetic speaker systems, unless otherwise released by the creator.
- Third-party enhancements that introduce novel, standalone mechanisms unrelated to the SuperState power or field system designs.
- Names, symbols, or brands not explicitly created by Jay or included in this document.

Final Statement

This license is irrevocable, global, and eternal. The SuperState technologies are now part of the commons- for everyone, forever.
